

DevOps Engineer with ~4 years of experience designing, implementing, and optimizing scalable cloud infrastructure and automation solutions. Strong background in cloud platforms, Kubernetes, Terraform, CI/CD, and observability, with a proven track record of improving system reliability, performance, and maintainability. Experienced in building production-grade, secure, and highly available systems at scale. Passionate about cloud infrastructure, automation, and simplifying complex systems. A critical thinker with a solid understanding of distributed systems, networking, and high-availability architectures.

SKILLS

IAC	Terraform
Orchestration	Kubernetes, Helm, KEDA, Istio
Cloud	AWS, GCP
CI/CD	GitHub Actions, ArgoCD, Jenkins, Harness, GitLab CI, Concourse
Observability	Grafana, Prometheus, Thanos, Datadog, New Relic, Fluent Bit, EFK, Groundcover
Tools & Framework	Docker, Nginx, Istio, Linux, Git, RESTful API
Scripting	Python, Go, Bash, Groovy
Database	RDS, Cloud SQL (PostgreSQL), Firestore, MySQL, MongoDB

TECHNICAL EXPERIENCE

Blackduck (formerly Synopsys Software Integrity Solutions) <i>Sr. DevOps Enigneer</i>	June 2025 - Present <i>Bengaluru, India</i>
- Upgraded 1100+ PostgreSQL Cloud SQL instances to PG16, achieving 100% data consistency, 0% downtime, and implementing automated rollback workflows. - Implemented Pod Security Standards across 60+ GKE clusters, ensuring 100% policy compliance and 0 service disruption through coordinated rollout with app teams. - Built secure internal connectivity using GCP Private Service Connect, improving network isolation by 90% and enabling reliable access for internal services in air-gapped environments. - Managed 24x7 on-call responsibilities and created 10+ dashboards, alerts, and monitors using Datadog, Thanos, and New Relic, improving and boosting overall observability. - Led end-to-end product infrastructure setup — architected Terraform modules for GCP networking, load balancers, NEG, DNS with NS delegation, SSL certificates, CMEK-encrypted buckets, Cloud SQL, and Pub/Sub; deployed on Kubernetes via Helm; drove the product from initial deployment through bug resolution to stable production. - Spearheaded CI/CD migration from Harness, GitLab CI, Concourse, and Jenkins to a modern GitOps stack using GitHub Actions + ArgoCD — including ArgoCD setup, approval gates via GitHub workflow, and Secret Manager integration for secure deployments. - Established production observability with Thanos, Grafana, and New Relic for monitoring and alerting across the product stack. - Led migration from NGINX ingress to Istio service mesh gateway, improving traffic management, mTLS security, and observability across microservices. - Designed and deployed an AI-powered internal chatbot using Firestore as document storage, integrated with Claude AI — enabling customer admin teams to query scan rates, customer-workload relationships, and operational data via natural language in production. - Implemented secure container image strategy using Chainguard hardened images, eliminating critical CVEs and reducing image vulnerability surface by 95%+ across production workloads. - Enforced FedRAMP-aligned security standards across Kubernetes and cloud infrastructure — including least privilege IAM, audit logging, encryption (at-rest/in-transit), and vulnerability management, achieving compliance readiness for regulated environments.	
BigBasket <i>DevOps Enigneer I</i>	July 2023 - Jun 2025 <i>Bengaluru, India</i>
DevOps Self-Service Portal: Designed and led the development of a self-service tool for access management, report creation, and creation of AWS and Kubernetes resources. Automated approval processes using Slackbot, integrated with Slack, Jira, and Mail for notifications and tracking. Reduced operation time and manual DevOps efforts by 90%, full traceability via MySQL. EKS Upgrade & Migration: Refactored EKS Terraform code and led blue-green migration of 100+ microservices from EKS v1.24 to v1.30 with zero downtime.	

- **Event-Driven Autoscaling Using KEDA:** Designed and established event-driven autoscaling for Kubernetes workloads using CloudWatch metrics and KEDA.
- **Jenkins Upgrade and containerization:** Upgraded and containerized 5+ Jenkins v2.26x instances to LTS; resolved 20+ plugin, dependency issues, migrated persistent data on EBS-based PVCs—enhancing stability and observability
- **LLM-Based Troubleshooting (HolmesGPT):** Integrated HolmesGPT, a production-grade LLM-powered troubleshooting solution in the Kubernetes cluster.
- **Cloud Cost Optimization:** Implemented cost-tracking mechanisms for AWS and Kubernetes, reducing monthly cloud expenditure by \$20,000.
- **Observability & Incident Management :** Deployed Prometheus-Grafana stack, Fluent Bit+Athena logs and FIM Auditbeat built 10+ dashboards; resolved 30+ incidents via on-call, enabling 99.9% uptime.
- **Legacy monolith Upgrade:** Migrated Ubuntu 14 to 24, rebuilt servers with NGINX and Docker, optimized performance, ensured audit compliance, and reduced costs by 30%, enhancing system efficiency and reliability across infrastructure.

BigBasket

DevOps Intern

Jan 2023 - Jun 2023

Bengaluru, India

- Automated diverse processes using **Jenkins, AWS, and Python**, reducing manual intervention across **10+ key workflows**
- **Setup Slackbot** to streamline the approval process using **AWS Lambda**, reducing manual efforts and boosting efficiency by **60%**.

EDUCATION

International Institute of Information Technology, Naya Raipur

Bachelor of Technology, Computer Science

Aug 2019 - Jun 2023

CGPA - 7.7

CERTIFICATIONS

- | | |
|---|--------------|
| • Google Cloud Certified – Professional Cloud Architect | Google Cloud |
| • AWS Certified Solutions Architect – Associate (SAA-C03) | AWS |
| • Certified Kubernetes Administrator (CKA) | Kubernetes |
| • HashiCorp Certified: Terraform Associate (003) | HashiCorp |

PROJECT

PERSONAL PROJECTS

Cloud Platform Blueprint

github.com/anurag19100/cloud-platform-blueprint

- Built a **multi-cloud infrastructure platform** provisioning production-grade **EKS and GKE clusters** from a single Terraform codebase with **modular IaC, remote state, and automated cost estimation via Infracost**.
- Integrated **ArgoCD GitOps, Istio service mesh, Prometheus-Thanos observability, KEDA autoscaling, and OPA policy enforcement** — fully automated via **GitHub Actions** with approval gates.

DevOps AI Ops Agent

github.com/anurag19100/devops-ai-agent

- Designed a **multi-agent AI system** for DevOps operations — agents autonomously review Terraform plans, triage Kubernetes incidents via **Prometheus and log queries**, and generate runbooks using **Claude AI and MCP protocol**.
- Built with **Python, Firestore, Slack ChatOps, and GitHub Actions triggers** — extending production patterns from real-world AI chatbot deployment.

Kubernetes Self-Service Portal

github.com/anurag19100/k8s-self-service-portal

- Open-source **developer self-service platform** for Kubernetes namespace provisioning, app deployment, secrets management, and log/metrics access with **Slack-based approval workflows and full audit trail**.
- Built with **Go/Python, Kubernetes API, Terraform, React UI, and RBAC-based access control** — inspired by production portal that reduced manual DevOps effort by **90%**.
